

Project Initialization and Planning Phase - Proposed Solution

Date	30 September 2026
Team ID	SWTID-2026-7365
Project Name	Student Enrollment & Course Management System (SECMS)
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) Report

SECMS is a Salesforce-based application that centralizes student, course, instructor and enrollment information and supports structured workflows for enrollment processing, validation, approval, instructor assignment, reporting and monitoring.

Project Overview

Objective	Replace manual and fragmented enrollment handling with a structured, scalable, automated and secure Salesforce solution.
Scope	Data objects, fields, relationships, Lightning navigation, record types, page layouts, validation rules, approval processing, flows, reports, dashboards and security controls. Future-scope items are not part of the current implementation.

Problem Statement

Description	Enrollment information is scattered across manual or unintegrated systems, leading to duplicate entries, delayed reporting and approval bottlenecks.
Impact	Manual effort and errors for enrollment officers, and reduced visibility of enrollments and revenue for administrators.

Proposed Solution

Approach	Build SECMS on the Salesforce platform using Lightning for the interface, custom objects as the database layer, Flows for automation, Validation Rules for data integrity, an Approval Process for controlled decisions, Reports and Dashboards for monitoring, and Profiles, Permission Sets and sharing settings for access control.
Key Features	Student, Course, Instructor and Enrollment objects with lookup relationships; New Enrollment and Re-Enrollment record types; email and fees-paid validation rules; enrollment approval process; flows for enrollment date, approval notification, automatic instructor assignment and follow-up tasks; four operational reports; Student Management Dashboard; role-based security.
Novelty	End-to-end use of cloud configuration and automation for the enrollment workflow.
Social Impact	Improved visibility and a more structured student-enrollment experience.
Revenue Model	Institutional deployment.
Scalability	Support for multiple departments and future modules.

Resource Requirements

Resource Type	Description	Specification / Allocation
Platform	Cloud platform	Salesforce Lightning Platform (Developer Edition org)
Hardware	Client device	Computer with a web browser and internet connection; no dedicated server required
Data Model	Custom objects	Student, Course, Instructor, Enrollment with lookup relationships

Resource Type	Description	Specification / Allocation
Automation	Declarative tools	Salesforce Flows and Approval Process
Data Validation	Rules	Validation Rules on Student and Enrollment
Analytics	Reporting	Salesforce Reports and Dashboards
Security	Access control	Profiles, Permission Sets, Sharing Settings / OWD
